Nerf optique (II) Nerf oculomoteur (III)

Nerf pathétique (IV)

Trijumeau (V)

Nerf abducens (VI)

Nerf facial (VII)

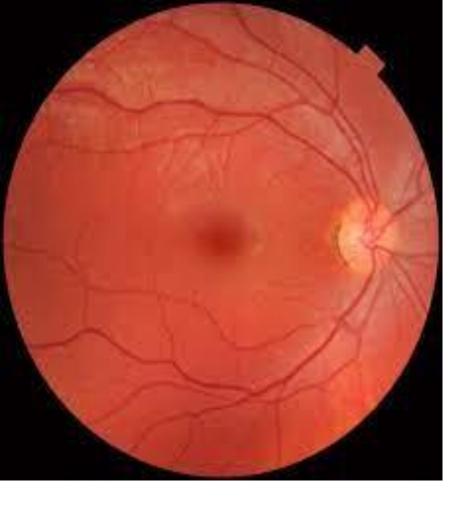

Nerf acoustique (VIII)

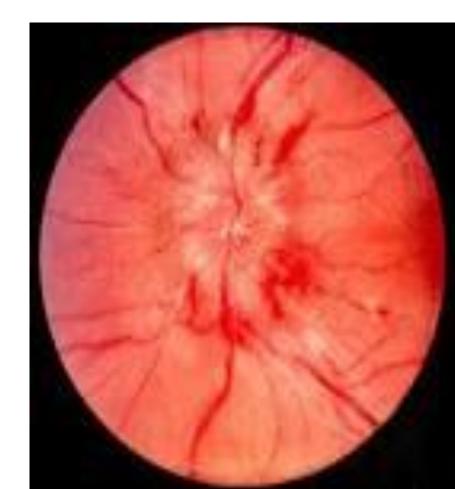

Nerf glossopharyngien (IX)

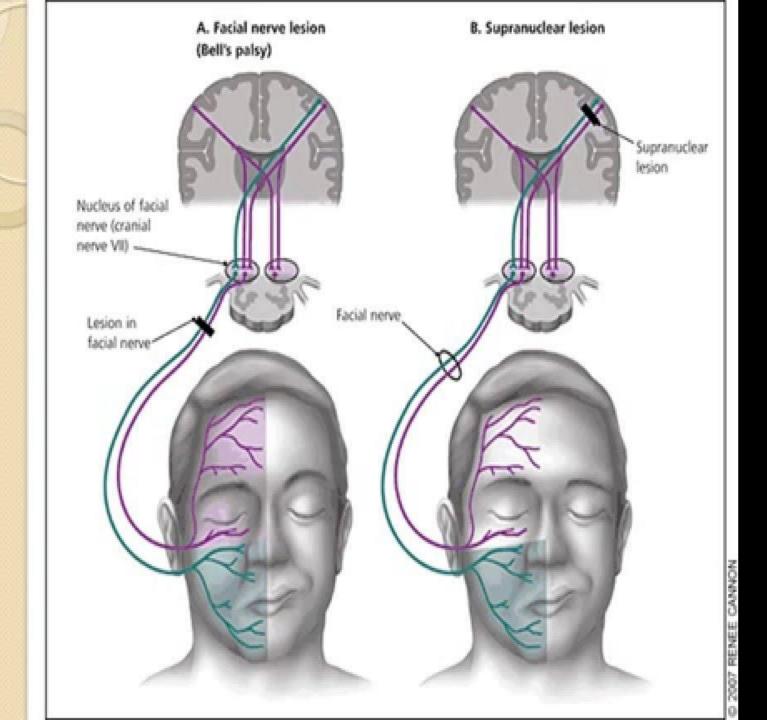

Nerf vague (x)

Nerf spinal (XI)

Nerf hypoglosse (XII)

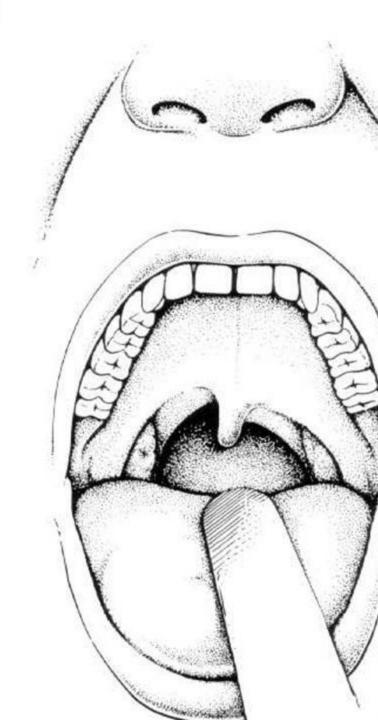

Réflexe pharyngé:

Elévation symétrique du voile du palais et de la luette lors de la stimulation pharyngée

Signe du rideau:

le côté faible du palais reste déprimé, le côté normal lève, entrainant la luette

Dans le cas montré: le patient dit "Ahh" et on voit l'asymétrie du mouvement du palais (lésion NC 10 ?)
